CPASS Portal – Change Requirements

Document type: Change Requirement Specification
Project: CPASS – Candidate Placement Documents Portal
Source: Client review meeting
Date: 23 October 2026
Status: For client review and confirmation

1. Purpose

This document records the changes agreed during the recent review meeting for the CPASS portal. It covers the login screen, role naming, state-wise access for Placement Coordinators, and updates to the Placement Coordinator (L1) dashboard. Please review each item and confirm, or flag any point that needs correction or clarification.

2. Summary of Changes

#	Area	Change
1	Login Screen	Update role names
2	Access Control	State-wise login credentials for Placement Coordinators (12 states)
3	Access Control	State-restricted data visibility
4	Dashboard	State-level summary cards
5	Dashboard	Clickable cards that display candidate lists
6	Dashboard	PaySlip button – new options
7	Dashboard	Remove Verification Progress section
8	Dashboard	Remove Criteria Compliance column (Section 4)
9	Dashboard	Make Section 5 non-editable
10	Dashboard	Remove Section 6

3. Detailed Requirements

3.1 Login Screen – Role Name Changes

The role names displayed on the login screen will be updated as follows:

Level	Role Name	Short Form
L1	Placement Coordinator	Coordinator
L2	Center Head	CH
L3	COPS	COPS
L4	Business Leader	BL
L5	Chief Executive Officer	CEO

Note: The meeting notes mark the renaming as completed for L1 to L4. L5 (CEO) is listed in the role hierarchy but is not marked as completed. Please confirm whether L5 is in scope for this release.

3.2 State-wise Login Credentials for Placement Coordinators (L1)

Separate login credentials will be created for the Placement Coordinator (L1) of each state, covering a total of **12 states**.

Credential format: `statename.cpass`

Example – Tamil Nadu

Field	Value
Username	tn.cpass
Email	tn.cpass@synchroserve.in
Password	tn@123

The same pattern will be applied to the remaining 11 states.

Security recommendation: The example password follows a predictable pattern. We recommend issuing a temporary password for each account and requiring a password change at first login.

3.3 State-restricted Data Access

- Each Placement Coordinator will see **only the data belonging to their own state**.
- Example: when the Tamil Nadu Placement Coordinator logs in, only Tamil Nadu data is displayed. Data from other states is not shown anywhere in the portal.
- This restriction applies to dashboard counts, candidate lists and all related views.

3.4 Dashboard – State-level Summary Cards

The Placement Coordinator dashboard will display the following figures, calculated for the logged-in coordinator's state:

Card	Description
Total	Total candidates in the state
CPASS Approved	Candidates approved under CPASS
CPASS Rejected	Candidates rejected under CPASS
CPASS Uploaded	Candidates uploaded by the Placement Coordinator
Pending / Remaining	Candidates awaiting action

3.5 Dashboard – Clickable Cards

Each summary card will be clickable. Selecting a card displays the corresponding candidate list.

Illustrative example (sample values only)

Card	Sample Count
Total	50
CPASS Approved	10
CPASS Rejected	5
CPASS Uploaded	10
Pending / Remaining	25

Behaviour:

- **Total** – shows the complete list of candidates.

- **CPASS Approved** – shows the approved candidates.
- **CPASS Rejected**, **CPASS Uploaded** and **Pending / Remaining** – each shows its own specific list.

Open point for client confirmation: For the Approved and Remaining views, the meeting notes ask which count should be displayed. We recommend the following so that the cards always reconcile:

- Each card shows its own count, and the list opened by a card contains exactly that many records.
- **Pending / Remaining = Total − (Approved + Rejected)**. With the sample values above, 50 − (10 + 5) = 35.
- **Uploaded** is tracked separately, since it describes who submitted the record rather than its approval status.
- The Approved view may also display the remaining count as a secondary indicator, so coordinators can see their progress at a glance.

Note that the sample figures (Remaining = 25) do not follow this formula. Please confirm which definition of "Pending / Remaining" the business intends, so it can be applied consistently.

3.6 Dashboard – PaySlip Button

The PaySlip button will be extended with two options:

Option	Purpose
Browse	Allows the user to browse and select a payslip file for upload
Not Available	Allows the user to indicate that a payslip is not available for the candidate

Note: The exact behaviour of "Not Available" (for example, whether a reason must be entered, and whether the candidate is still treated as complete) will be finalised on confirmation.

3.7 Dashboard – Section Changes

Section	Change
Verification Progress	Remove the section
Section 4 – Criteria Compliance column	Remove the column and all related code

Section	Change
Section 5	Make the section non-editable (read-only)
Section 6	Remove the section
